EDUCATION

University Of Technology Sydney

Bachelor of Computer Science (Honors)

Sydney, NSW

Feb. 2025 – Feb 2029

Australian College Of Higher Studies

Certificate IV Business

Sydney, NSW

Aug. 2025 – Oct 2025

EXPERIENCE

Graduate Full Stack Developer

Winning Group

May 2025 – January 2026

Waterloo, NSW

- Reduced component-related UI defects (e.g., hitboxes, alignment) by actively tracking and resolving issues logged in Jira, enhancing overall user experience.
- Made history as the first internal transfer from a sales role to a technical position at Winning Group.
- Collaborated closely with QA/Product teams and maintained the application backend and PostgreSQL database to support key feature rollouts and stabilize application performance.

Software Developer

BLOB

January 2026 – Present

Sydney, NSW

- Independently scoped, designed, and implemented full-stack projects from written briefs provided by the senior engineer.
- Collaborated with the UI/UX designer to translate design direction into functional interfaces.
- Worked within a small two-person technical team, operating with a high degree of autonomy while maintaining alignment with broader product goals

PROJECTS

Tournament Organiser Bot | *Typescript, Node, NPM, Google API, Discord*

January 2026

- * Architected and deployed a Discord bot for BLOB Productions to automate tournament management.
- * Integrated Google Sheets API as a cloud database solution, enabling real-time data synchronization and non-technical staff.
- * Implemented Discord slash commands and interactive button/modal interfaces using Discord.js v14, allowing 100+ concurrent users to register teams, manage rosters, and claim tournament slots through intuitive UI components

Tournament Camera UI | *Typescript, Node, WebRTC, PNPM*

January 2026

- * Built a full-stack facecam overlay system for live tournament broadcasts using WebRTC, React (TSX), and Node.js, enabling real-time webcam feeds to be displayed in a HUD overlay
- * Engineered a client-side video buffering strategy to introduce configurable artificial delays to sync player facecams.
- * Implemented a signaling/relay backend to manage WebRTC peer connections, slot claiming, and per-player or global delay configuration
- * Delivered codebase in strict TypeScript with reusable component interfaces (e.g. FacecamPlayerProps) and Tailwind CSS styling across three distinct interfaces: Organizer Dashboard, Player Portal, and Broadcast Overlay

Heelix | *PHP, Laravel, Postgres, React.js*

May 2025 - January 2026

- * Designed and implemented a security fix to prevent unauthorized sign-ups from managed Heelix apps, projected to reduce administrative workload by eliminating manual deletion of accidental accounts.
- * Maintained and optimised a PostgreSQL database alongside the application backend, ensuring data integrity and stability during key feature rollouts
- * Created full stack clone app to increase my understanding off the Heelix app

TECHNICAL SKILLS

Languages: Java, Python, C++, SQL (Postgres), JavaScript, HTML/CSS, PHP, Typescript

Frameworks: React, Node.js, Flask, Laravel, Discord.js

Developer Tools: Git, Docker, BitBucket, Google Cloud Platform, VS Code, Jira, Debian, Linux
